BEIJING AERONAUTICAL MANUFACTURING TECHNOLOGY RESEARCH INSTITUTE

BAMTRI mainly involved in a large number of advanced manufacturing technologies and equipment for the development of new type aircrafts, aero engines and technical renovations to aircraft manufacturers as well as other fields in defence industries, such as aerospace, electronics and weapons. All of its achievements in CNC&FMS system, computer application software, high energy density beam processing, advanced electric machining, non-conventional welding, composite structure manufacture, honeycomb adhesive bonding, sheet metal forming, mechanical joining and assembling, NDT and transducers and its production organization and management of the aviation industry are in the leading position and rated as an advanced level in China. About 27 laboratories including National Key Laboratory for High Energy Density Beam Processing Technology, Key Laboratory for Aviation joining Technology, Key laboratory of Aeronautical Science and Technology for Numerical Control Manufacturing Technology and AVIC R&D Center for Resin Matrix Composite Structure Manufacturing Technology have been set up in the institute. As well as its great effort on the research projects, BAMTRI also undertakes the production tasks of part of the key components and parts on both civil and military aircrafts.
